

好空氣社區  
CLEAN AIR  
NEIGHBORHOOD

The programme is initiated by Clean Air Network (CAN) in partnership with the Institute for the Environment of the Hong Kong University of Science and Technology (HKUST-IENV), aims to help Hong Kong youngsters build air quality literacy and issue-solving capabilities.

Goals

Over the next 24 months, a series of student workshops and engagement activities across districts will be hosted on air sensing technology application and visualization of invisible air pollutants. The showcasing of integrated data science and innovative technologies will enable learners to acquire basic scientific skills for evidence-based decision making. It will further empower participating students to generate influence in community air pollution combat, in collaboration with parents and other stakeholders.

Program Engagement

Organized by Clean Air Network

District Deep Dive -  
Clean Air Neighborhood of 1.5km Radius

Collaborated with HKUST-IENV

Territory Wide Empowerment -  
Clean Air Challenge across 18 districts in HK

Expand to other districts  
Focus: Tuen Mun

District to Territory:  
Role model applied  
in other districts

Demonstration:  
Showcase of  
transformation  
(6 schools in a district)

Anchor School:  
Foster a core partner  
school at the district level
